

## Restaurant Website

### Superadmin

- Can login with **info@grynasmaistas.lt**
- Can create restaurant(s)
- Can create menu(s)
- Can create items
- Can add items to specific menu
- At the moment there are only 2 different restaurants but possible that there will be more in the future, so a dynamic system is needed
- If possible the superadmin would like to have a basic “statistics” page where the total number of orders can be seen (monthly, weekly, yearly) and also what dish/dishes were most popular

### Staff

- Staff at restaurant 1 log in and can see
  - Current orders for restaurant 1 (a clear division is needed for delivery and pickup)
- And the same goes for restaurant 2. The restaurants should not be able to see each others orders
- 2 separate logins already exist:
  - Restaurant 1 (name/email): grynasmaistas - [hadesilute@gmail.com](mailto:hadesilute@gmail.com)
  - Restaurant 2 (name/email): hade - [hadebirute@gmail.com](mailto:hadebirute@gmail.com)
- Staff can remove orders from “current orders lists” when the order/delivery is completed. Or, for example, if a customer calls to cancel an order
- These “deleted/removed” orders should still be accessible on a separate list and staff should have the ability to put them back into the “current orders”. For example if a staff member accidentally deletes or removes the wrong order

### Customer:

#### **ORDER**

- Customer can log in via facebook/gmail - email confirmation for the account
- Customer can also continue as a guest and login later
- The flow for the order process (and general design expectations) can be seen here [https://xd.adobe.com/view/3945bc2d-efae-4806-b40d-1fd43abacd3f-6c16/?fbclid=IwAR2G97LGNCeDIZWtM5CiYct6LrgWsW1zrY4t-lXhDu1Lesn28cyQ3j\\_RQ8c&fullscreen](https://xd.adobe.com/view/3945bc2d-efae-4806-b40d-1fd43abacd3f-6c16/?fbclid=IwAR2G97LGNCeDIZWtM5CiYct6LrgWsW1zrY4t-lXhDu1Lesn28cyQ3j_RQ8c&fullscreen)
- The flow is:
- Choose restaurant
  - choose soup
  - choose main dish (the side dishes then drop down from the main dish)
  - choose side
  - choose drink
- Your order

- Shows full order
- Comments text field (max 200 characters)
- Confirm order
- Add more
- Add more takes the customer back to soups and the process repeats (when this process repeats the customer has to see which items and what quantities he has selected already)
- The customer can at anytime edit their order by clicking the basket/cart icon in the navbar at the top
- In the basket/cart and under “your order” the order should be categorized into
  - Soups
  - Mains + sides
  - Drinks

## DELIVERY/PICKUP

- When customer confirms their order, the options are:
  - Delivery
  - Pickup
- If delivery and customer is guest:
  - Login should be an option or...
  - Enter Name
  - Phone number
  - Email
  - Address for delivery:
    - Street
    - House number
    - Flat number
    - Postcode
- If delivery and customer is logged in:
  - If they do not have any info saved they should be given the info/address form
  - If they do they can choose their saved info/address or edit the delivery info/address
- **If the address is not within the delivery radius of 8km then the customer can not confirm delivery**
- If a valid address is entered for delivery:
  - the customer will get a message that the food will be delivered within 1 hour
  - confirm
- If pickup instore:
  - the customer is asked to choose a time for pickup (10min gap selections) between the hours of **Hade - 11:00 - 15:00 ; Grynias maistas - 10:00 - 16:00**
  - confirm

## **PAYMENT**

- The next page should be to select payment method
  - pay now with PAYSEREA
  - or pay when you get your food
- If PAYSEREA:
  - Customer is taken to paysera payment process
  - If successful customer is sent confirmation email
- If “pay when you get your food”:
  - Customer is sent confirmation email that includes the time for pickup/delivery
